

DIY TOXIN FREE DISHWASHER TABLET RECIPE

Ingredients

¼ c Non-GMO Citric Acid

½ c Sea Salt

1 c Baking soda

2 scoops Thieves Dishwashing powder

½ tsp -1 tbsp Thieves Household Cleaner

In a Glass or Stainless steel mixing bowl, mix together the citric acid, sea salt, baking soda and dishwashing powder. Slowly incorporate ½ teaspoon of the Thieves Household Cleaner at a time until the mixture holds together loosely when squeezed in your hand.

Press into an ice cube tray and let them dry overnight (i love these ones - the size is perfect for the compartment in my dishwasher). They will expand some in the container, so I found it helpful to place a large heavy pot or a cookie sheet stacked with books on top to keep it contained.

Once they are dry, pop the tabs out of the tray and store in a container.

To use, place one tablet in the machine compartment as you would any other commercial dishwasher tablets.

For sparkly clean dishes, dilute 1 capful of Thieves Household Cleaner in 1 cup of Food grade hydrogen peroxide or 1 cup of apple cider vinegar. You can also add a couple drops of Lemon Essential Oil to this mixture and pour it into the rinse aid compartment.
