

HOW TO SELECT THE RIGHT SAVVY MINERALS POWDER FOUNDATION FOR YOUR SKIN TONE

Mineral makeup is very light and forgiving. Wear lighter shades in the winter months and darker shades in the spring and summer months. Here are some tips for selecting the right foundation color for YOU...

1. Check Your Veins

Push your sleeves up and look at the veins on the inside of your wrist. Are they blue or green? If they look more blue, you likely have cool undertones. If the veins look greenish, you're warm.

2. The Jewelry Trick

Think about whether you look better in silver or gold jewelry. Typically, girls with cool undertones look better in silver and platinum metals, and warm-toned women look better in gold.

3. The Neutral Test

Think about what neutral shades flatter you best. Does your skin, eyes, and face look better in bright white and black hues, or ivory, off-whites, and brown/tan shades? The former means you're probably cool-toned, and the latter, warm.

4. Eye and Hair Color

Your natural eye and hair colors can help figure out your coloring. Customarily, cool people have eyes that are blue, gray, or green and have blond, brown, or black hair with blue, silver, violet and ash undertones. Conversely, warm-toned women usually have brown, amber, or hazel eyes with strawberry blond, red, brown, or black hair. Their hair tends to have gold, red, orange, or yellow undertones.

5. The Sun's Effects

When you're out in the sun, does your skin turn a golden-brown, or does it burn and turn pink first? If you fit into the former category, you're warm-toned, while cool tones tend to burn.
