#1 USE WINDOW LIGHT

Always face a window when taking selfies indoors so that you get the most flattering light on your face and sparkles in your eyes!

If window light feels too harsh, take a couple steps back from the window or put a light screen in front of it to soften the light.

#2 LOOK UP TO THE CAMERA

Keep your phone camera just above eye-level so that you have to look up at it just a little bit. This has a slimming effect which looks great on everyone! You can also hold your camera to the side slightly so that you have to turn your face towards the camera. This is also very flattering!

#3 DO NOT ZOOM

The zoom feature on your camera may seem like a nice option for a closeup, but it effects the sharpness of your photo. Use the crop feature on your photos instead to change the size of your image or to get rid of unwanted stuff in the background.

BONUS TIPS

- Use the self-timer on your phone
- Invest in a small tripod that can hold a phone and stand on a surface
- Invest in a simple bluetooth phone remote
